

# Synthetic Data Generation

## Generation Methods

- GANs and VAEs
- Diffusion models
- Statistical simulation
- Physics-based modeling

## Privacy Preservation

- HIPAA compliance
- Differential privacy
- De-identification techniques
- Secure data sharing

## Validation Approaches

- Statistical similarity testing
- Clinical utility validation

## Use Cases

- Algorithm development
- Training data augmentation

- Downstream task performance

- Rare disease modeling
- Clinical trial simulation

**Regulatory Acceptance:** FDA increasingly recognizing synthetic data for algorithm validation and testing
