

# Data Warehousing for EHR

## ETL Processes

- Extract from operational systems
- Transform & clean data
- Load into warehouse
- Incremental updates

## Data Marts

- Disease-specific repositories
- Quality improvement data
- Research cohorts
- Departmental analytics

## Star Schema

- Fact tables (encounters, labs)

## Real-time vs Batch

- Batch: overnight processing

- Dimension tables (patient, time)
- Optimized for queries
- Aggregate calculations

- Real-time: streaming analytics
- Near real-time: micro-batching
- Trade-offs in complexity
