

Clinical Phenotyping

📋 Computable Phenotypes

- Standardized disease definitions
- ICD codes + labs + meds
- Temporal logic criteria
- Inclusion/exclusion rules

📐 Rule-Based Methods

- Boolean logic (AND, OR, NOT)
- Diagnosis code combinations
- Lab value thresholds
- Medication orders

Machine Learning Approaches

- Supervised classification

✓ Validation Strategies

- Chart review (gold standard)

- Feature engineering from EHR
 - Random forests, deep learning
 - Semi-supervised learning
- PPV, NPV, sensitivity, specificity
 - Cross-institutional validation
 - Phenotype libraries (PheKB, eMERGE)
